

Peerawitch Lertsuksombut

SOFTWARE ENGINEER

L.peerawitch@hotmail.com 088-111-5949 github.com/khunbright

Bang Sue, Bangkok, Thailand

PROFILE

Software engineer with 3 years of experience, mostly on back-office and internal systems — inventory, property appraisal, booking approval, and merchant management. I started out as a front-end developer and now work full-stack: Next.js API routes, Prisma and Drizzle, and MySQL alongside the UI. I like turning messy internal workflows into screens people can actually use, and I care about clean, reusable code. I work well with product, design, BA, and QA teams in Agile.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, HTML, CSS, SQL
Frameworks	React.js, Next.js (App Router), Angular, Vue.js
Styling	Tailwind CSS, Bootstrap, shadcn/ui, HeroUI
Back-end & DB	Node.js, Prisma, Drizzle ORM, MySQL, REST API design, Zod
Testing	Jest, React Testing Library, Playwright
Tools & DevOps	Git, Docker, Postman, GitLab CI/CD, Google Cloud Run, AWS S3
Practices	Responsive design, UI/UX best practices, Agile, API integration, authentication & RBAC

WORK EXPERIENCE

Search Engine Optimization Co., Ltd. (Gother)

Jan 2024 – Present

Software Engineer — Front-End → Full-Stack

Gother CMS — internal back-office platform

`Next.js 14 · TypeScript · Prisma · MySQL · AWS S3`

- Work full-stack on a platform used by merchant partners and internal admin teams, building and debugging API routes alongside the UI.
- Work on the merchant e-KYC and e-signature flow, which connects to a third-party identity provider for ID verification, background checks, and signed documents stored on S3.
- Found and fixed a data-exposure bug in the eKYC status API, where a missing supplier filter let an admin see another merchant's verification result, and added tests to prevent regression.

Gother.com — hotel booking website (B2C)

`Next.js · React · TypeScript`

- Improved hotel search filtering to return faster, more relevant results and reduce friction in the booking flow.
- Built a hotel-highlight feature for name searches: instead of jumping straight to the detail page, the matched hotel now appears in a highlighted card next to other hotels in the same area, giving users more options.
- Implemented partner-price and auto-coupon display logic across the search, detail, and summary pages, including the rules for when each is shown.
- Built a Google Hotel integration that takes inbound traffic from Google Hotel links, decodes the JWT in the URL, and rebuilds the data needed to render a tailored search page.
- Maintained the shared Web Core component library used by every product on the platform, so UI changes ship once instead of being duplicated per team.
- Built SEO-friendly, responsive pages and added Google Analytics tracking to support marketing campaigns.

B2B Booking App — approval app for executives (iOS & Android)

`React · TypeScript · Capacitor`

- Built a cross-platform mobile app shipping both platforms from one codebase.
- Built an approval module for hotel, car-rental, and experience bookings created on the B2B website, so approvers can review and act from their phone.
- Integrated REST APIs to keep booking and approval data in sync between the web system and the app in real time.

STPA Enterprise Company Limited

Aug 2026 – Present

Full-Stack Developer (Freelance)

Shop Admin — e-commerce back-office

`Next.js 16 · React 19 · TypeScript · Drizzle ORM · MySQL · NextAuth · Docker`

- Built the products and categories modules end to end — database queries, server actions, form validation, and UI.
- Designed a three-layer permission system that gates the sidebar, each page, and every server action on per-role view/add/edit flags, so a denied action still fails on the server even if the UI is bypassed.
- Wrote the Drizzle data-access layer with sortable, paginated queries driven by URL search params, so sorting and paging survive navigation and shared links.
- Enforced unique product SKUs in both the form and the database, and handled image uploads with generated filenames to avoid collisions and path traversal.

Sirisoft Public Company Limited

Jun 2023 – Dec 2023

Front-End Developer

Property Appraisal Back-Office — internal appraisal system for Krungthai Bank

`Angular · TypeScript · Tailwind CSS`

- Built the Appraisal Request and Appointment Management modules, covering the flow from a new appraisal request through to scheduling the on-site visit.
- Created a reusable, responsive component set that the rest of the team built the remaining screens on.
- Worked directly with designers and back-end engineers to settle API contracts before development started.
- Tuned performance and fixed cross-browser issues across the application.

Advanced Wireless Network (AIS)

Aug 2020 – Mar 2022

Network Engineer

- Monitored and troubleshot WAN infrastructure for enterprise clients under 24/7 SLA, handling incidents across firewalls, DNS, NAT, and DHCP.
- Diagnosed connectivity and hardware faults and coordinated across teams to restore service, then documented each fix so the team could close repeat issues faster.

National Telecom Public Company Limited

May 2019 – Jul 2019

Web Developer Intern

Stock Manager — internal inventory back-office

`Vue.js · Laravel · MySQL`

- Built stock tracking and reporting screens that staff used to monitor inventory levels day to day.
- Designed the MySQL schema and handled data operations through phpMyAdmin.
- Gathered requirements from the IT team and turned them into working features.

EDUCATION

Silpakorn University, Nakhon Pathom
B.Eng. in Electronics and Computer System Engineering
2016 – 2019

Taphanhin School, Phichit
Math – Science Program
2013 – 2015

CERTIFICATES

- Microsoft Azure Fundamentals (AZ-900)
- Web Development with React: 15 Projects Workshop — Udemy
- Cisco Certified Network Associate (CCNA), 2022 — Jodoi
- Network & Network Security, 2021 — Jodoi
